vibration isolation

NOISE AND VIBRATION IN GYMS

The **REGUPOL sonusfit m-series** includes multilayer systems. Elastomers with different dampening and spring properties are combined. **REGUPOL everroll** is also used as the top layer. Through this combination, the introduced structure-borne noise can be effectively reduced, even without the use of a mass-spring system. Depending on the system, various stiffening layers are integrated so that the stability of the athletes is not impaired. The individual layers are laid on the bare floor or the screed and glued together.

This **REGUPOL sonusfit m513** (formerly sonsufit FX) system reflects a typical residential application with **REGUPOL everroll** rubber floor coverings. For all other applications please contact **REGUPOL acoustic** division. Please note that drawings are not to scale and are for illustration purposes only.

MACHINE PLATES

Machine plates are used to protect your **REGUPOL sonusfit m513** (formerly FX) flooring system from point load pressure on heavy fitness equipment. Available in three sizes, these stylish plates fit most modern gym equipment and machinery.

Available in:		
Small	300mm x 238mm	(Available in Metallic Grey or Black)
Medium	400mm x 238mm	(Available in Metallic Grey)
